

In the Specification:

Rewrite the title to read:

"Phone Privacy and Unobtrusiveness via Voice Cancellation".

Rewrite the second full paragraph on Page 5 as follows:

"However the arrays of ~~sensors~~ speakers 4 and ~~actuators~~ far-field sensors 5 ~~is~~ are intended to indicate the need for multiple ~~sensors~~ speakers and ~~actuators~~ sensors in spherical configurations. They may or may not be actually disjoint in physical layout. The far-field sensors 5, commonly referred to as error sensors in the signal-processing field, could be microphones or any other sensing devices. Real Time adaptive signal processing algorithms 3 which generate cancellation signals based on input sensors and and far-field sensors, are well documented in the field. Hardware as well as software solutions that implement these algorithms are commonly available."
